Santiago Carrizo

Full Stack & Mobile Developer | Salta, Argentina
santiago.carrizo.dev@gmail.com | linkedin.com/in/santiago-carrizo-fullstack | github.com/santiago-carrizo7

Professional Summary

Senior Software Programming student at Universidad Nacional de Salta (UNSa), focused on Full Stack and mobile application development. Specialized in building robust REST APIs, web platforms, and mobile applications using TypeScript, React, Node.js, Express, and Flutter, backed by relational databases (PostgreSQL). Experience designing B2B multi-tenant architectures with strict data isolation, offline-first mobile systems, and inventory automation with payment gateway integrations.

Featured Projects

Gestión Deportiva – B2B Multi-Tenant SaaS & Mobile App | *Senior Thesis Project* Salta, Argentina

- **Technologies:** Node.js, Express 5, React 19, Flutter, TypeScript, PostgreSQL, Prisma ORM, SQLite, Zod.
- Architected a 3-tier platform (REST Backend, Web SPA, and Mobile App) across 15 modules for sports club management.
- Designed backend multi-tenant architecture with strict JWT-based isolation in Prisma, preventing IDOR vulnerabilities.
- Developed the mobile app (Flutter) offline-first with local SQLite and atomic, idempotent batch synchronization to the API.
- Implemented JWT authentication with Refresh Token Rotation (RTR) and automated online payment integration via Mercado Pago API/Webhooks.

Alma Lectora – E-Commerce & Editorial Management System | *Independent Project* Salta, Argentina

- **Technologies:** React 19, Node.js, Express 5, TypeScript, PostgreSQL, Prisma ORM, Tailwind CSS, Zod, Sharp.
- Developed a decoupled e-commerce platform (SPA + REST API) for catalog digitization and inventory automation.
- Implemented fuzzy search in PostgreSQL using raw queries (`$queryRaw`) and trigram GIN indexes (`pg_trgm`) with a > 0.3 similarity threshold.
- Built a stock ingestion pipeline featuring a camera-based barcode scanner (ISBN) with fallback between external APIs.
- Designed a transactional algorithm (`$transaction`) for combo stock deduction and image compression to WebP ($<$ 200 KB).

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Dart, SQL
Frontend Web: React 19, Tailwind CSS, TanStack Query, Zustand, Vite, React Hook Form, HTML5, CSS3
Backend & APIs: Node.js, Express 5, REST API Design, Zod, JWT (HTTPOnly Cookies / RTR), Bcrypt, OpenAPI (Swagger)
Databases & ORM: PostgreSQL, Prisma ORM, SQLite, Advanced SQL Queries, Composite/GIN Indexes, ACID Transactions
Mobile Development: Flutter, Provider, Dio (Interceptors/Retry), Offline-First Architecture with SQLite
Tools & DevOps: Git, GitHub, Docker (Local Environment), Vercel, Mercado Pago API, Firebase FCM

Education

Universidad Nacional de Salta (UNSa) Salta, Argentina
Senior Computer Programming Student (Final Year) – Expected Graduation: Late 2026 *2023 – Present*

- Solid foundation in computer science fundamentals, algorithms, data structures, and relational databases.

Languages & Continuous Education

Languages: Spanish (Native), English (Basic / Technical reading with assistance tools)
Continuous Education: Self-taught specialization focused on modern Full Stack ecosystem standards (React, Node.js, TypeScript)
